

Alberta Johne's Disease Initiative

Dairy Herd Management Plan

Farm Name: _____

Owners Name: _____

Veterinarian: _____

Date of on-farm JD risk assessment and JD management plan (yy mm dd):

Ideally, only ONE priority best management practice (BMP) to decrease the risk of Johne's disease (JD) on the farm will be agreed to for implementation within the next year by the herd owner. It is essential that the owner is willing and able to implement it. If the owner wishes to further reduce the risk of JD, a maximum of three BMPs may be agreed upon. It is important to understand that the intent of the AJDI is to control and minimize the spread of JD, not necessarily eradicate it.

Recommendation(s) for management changes on this farm:

1.

2.

3.
